

EXCITING NEWS!

We have expanded our practice, adding several new and exciting services. These services include laser hair removal, laser vein removal and LaserFACIAL non-invasive therapy under direct supervision of our physicians.

We use the latest in technology to effectively treat hair on patients with any skin color, including tanned skin, with no adverse effects for any of those areas where unwanted hair might be. Patients can resume a normal lifestyle within minutes of being treated. Imagine not having to shave again!

We can now successfully treat a wide range of unsightly vascular lesions, from fine facial veins, and spider veins to varicose leg veins. Our treatments are non-invasive, fast, safe and effective. Because there are no painful injections or incisions patients can resume normal activities within minutes of treatment.

We can also offer a new treatment called LaserFACIAL non-ablative therapy, which is an innovative, technologically advanced way to promote vibrant and healthy looking skin in both men and women. By treating those conditions that are typically associated with premature signs of aging such as wrinkles, large pores, unsightly facial veins, redness and sun damaged skin, you can have a more youthful appearance.

If you have any questions regarding any of these services, please do not hesitate in calling our clinic for more information. We thank you for your continued support and look forward to seeing you again soon. Call (803)705-2120 today for an appointment!

Sincerely,

The Staff of Women Physicians Associates OB/GYN
